SurfacePrep Announces Strategic Partnership with Guffey Systems to Revolutionize Industrial Finishing Efficiency

SurfacePrep, a leading provider of surface preparation and finishing solutions, is excited to announce a strategic partnership with Guffey Systems, an award-winning innovator in material handling technology for industrial manufacturing and coating facilities.

Guffey Systems designs and manufactures innovative finishing and material handling solutions engineered to simplify production and boost efficiency. Proudly made in the USA, our equipment includes advanced rail systems, patented spray hubs and hangers, and flexible mobile carts—built to streamline critical shop processes like sanding, spraying, and drying. At the core of our products is the PivotLine® Manual Rail Finishing System, which enables finishing all sides of a part at once, allows for contactless spraying that eliminates the handling of wet parts, and delivers a complete finished part in less time. Guffey Systems helps finishers do more with less—less material handling, less rework, and less waste—while driving serious gains in throughput and shop productivity.

“SurfacePrep is committed to delivering solutions that enhance safety, productivity, and resource efficiency. Our partnership with Guffey Systems reinforces that mission with a patented, innovative tool designed to solve everyday challenges and help customers improve efficiency, quality, and margins.” — Matthew Reilly, Director of Paint & Powder, SurfacePrep

“This partnership represents a natural expansion of SurfacePrep’s commitment to delivering best-in-class solutions across paint, powder, prep, and cure processes,” said Brent Cassil, VP of Strategic Growth at SurfacePrep. “By integrating Guffey Systems’ advanced fixturing and mobility products, we empower our customers to achieve smarter, more efficient production workflows.”
